

# Input on future plans of actions

Wenche Aas, EMEP-CCC, NILU, Norway

## From a regional air quality perspective (Wenche Aas)

- **Potential application areas**
  - **Flux** –a strong need for more flux measurements at different terrestrial areas to better quantify dry deposition
  - **Improve spatial distribution** for certain compounds, i.e different VOCs
- **Fit for purpose?** Necessary to know and document:
  - the sensitivity (detection limit)
  - selectivity (other species measured)
  - traceability (calibration etc)
  - stability (long or short term measurements)
