

Examples of guidelines/applications of environmental technologies for the Revision of the AQD in Latvia

December 4-6, 2012 Rome

Dr. Iveta Steinberga (Latvia)

Function in the Action (WG3 Member, SIG4 Member, Gender Balance Committee Coordinator)

Existing situation

(1) Measurements – DOAS (7 urban + 2 rural stations)

(2) Modelling – dispersion model (AERMOD)

For regulatory purposes:

- (1) EnviMan (OPSIS)
- (2) ADMS Urban
- (3) OML

Oglekļa oksīda 8 stundu 98-procentīlo koncentrāciju novērtējums Rīgā, Andrejostas rajonā

BEZ UZNEMUMIEM:

- 1. A/S RIGAS OSTAS ELEVATORS (RIGA, ANDREJOSTAS IELA 14);
- SIA "Rīgas Centrālais Termināls filiāle "Andrejosta" (Rīgā, Eksporta ielā 15);
- 3. SIA "RIGAS CENTRALAIS TERMINALS" (RIGA, EKSPORTA IELA 15);
- 4. SIA "STREK" (Riga, Uriekstes iela 9)

M 1:25 000

Izkliežu aprēķini veikti analizējot gaisa piesāmojuma līmeni Andrejostas rajonā. Aprēķinos iekļauti:

- stacionārie piesārņojuma avoti (datu bāze 2-Gaiss);
- mobilie piesārņojuma avoti (transporta plūsmu intensitātes mērījumu dati).

Režģa šūnas izmēri - 50×50 m.

Existing problems

- 1. Uncertainties in emissions (due to avoid monopoly);
- 2. PBL calculations (different parametrization methods P-G or Monin-Obukhov?);
- 3. Odour dispersion;
- 4. Spatial resolution problem (manipulation with results);
- 5. PM modelling;
- 6.

Special interests (data objectives from AQD)

- aerosol and odour models,
- seconadry aerosols,
- 3. aerosol abrasion (tire wear, brake wear, diff. types of pavements, etc.),
- 4. aerosol resuspension (sanding, washing effects, etc.)
- 5. air quality forecasts,
- 6. validation of models (at late and early stages).
